

**PRÉMIO  
INOVAÇÃO**

Launched in September 2016, *the PT Innovation Award* aims to contribute to the identification and promotion of Portuguese technological talent, both in

terms of individuals and startups. Projects presented for the PT Innovation Award are scrutinized by a jury whose members are recognized within the technological world and are representative of different categories: PT/Altice Labs, Media, Startups, Academia and Government Agencies.

PT is part of the Altice Group and has 3 main axes: innovation, investment and quality of service, aiming to build future proof state of the art infrastructure.

PT provides the largest and most modern fiber optic network in Portugal that, by 2020, will reach 3 million homes and businesses. It also has the highest quality 4G mobile network in the country, covering 93% of the population, positioning itself as a successful multi-play operator, leading convergent and best-in-class offerings worldwide. PT invests the most in innovation in our country.

The infrastructure network, coupled with its innovative capacity in Altice Labs, positions PT as the best prepared player in Portugal regarding the development of cutting-edge technology, and with the most innovative ecosystem of solutions, services and products. This network, coupled with the international experience of the Altice Group, enables a broad research capacity, anticipates technological risks, as well as identifying and integrating talent.

**Mater Dynamics won the PT Innovation Award in 2017.**

Our most recent technological advances were presented during this Innovation award. At that moment, Mater Dynamics was rebuilding a new version for QStamp® and that was the time to disclose what we had been doing so far. PT and Altice Group were considered as potential business partners

regarding their worldwide experience in telecoms, a complementing feature for QStamp®-based services. Nonetheless, we embraced this opportunity to disclose our milestones regarding our on-going pilots, where a jury comprising PT/Altice Labs, Media, Startups, Academia and Government Agencies could validate (or not) our growth and strategic planning.
